Hazardous Plants & Infected Insects

May 2016

by BHS

Hazardous plants and infected insects…..an outdoor enthusiasts worst nightmare!

Can you tell the difference between poisonous and non-poisonous plants? What are the treatment options to relieve symptoms? How do you protect yourself from ticks and mosquitoes?

All of these questions answered and more in the easy to follow tutorial below with the help from Karen Boyce-Lindgren, a Senior Consultant and Industrial Hygienist at The Hartford.

Poison Ivy and poison oak looks different depending on the region. To clearly identify the plant in your area click this link.

If you need training assistance on hazardous plants and infected insects, we are here to assist.
